Enclosed Ratchets

Quilters can easily advance their quilts. The rails are easily removed by simply pivoting the top ratchet housing open. Nothing to squeeze or release.

Simply push the ratchet stop to disengage the ratchet.

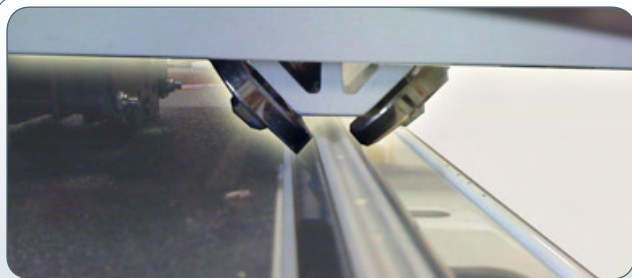

Steel Rail Couplers

The all new fabri-fast steel rails bring the best innovation and design to the quilter. No more screws or push pin heads to slide your rulers into.

Take-Up Hand Wheel

Effortlessly advance your quilt by utilizing the new take-up ratchet wheel.

New Dual Bearing Wheels

New dual bearing wheels provide additional stability and smoother carriage movement. The machine is better supported by the eight precision bearings and glides effortlessly across the frame.

Height Adjustable Legs & Side Tension Mounts

New adjustable legs allow the customer to select the ideal quilting height from 37" to 43" (fabric surface). Fully adjustable side tension mounts allow the user to place the bungee clamps in alignment with the fabric creating even tension.

Steel Track Supports & New Plastic Tables

New steel track supports provide additional strength and rigidity to the frame. The tables are manufactured with thicker rigid plastic improving the work surface.
